How much does a car battery weigh?

On average, a standard car battery weighs around 40 to 60 pounds (18 to 27 kg). However, some batteries can weigh as little as 30 pounds (13.6 kg) or as much as 70 pounds (31.7 kg). It's important to note that the weight of the battery includes not only the lead-acid cells but also the plastic casing, terminals, and electrolyte.

How do you calculate the weight of a battery?

To calculate the weight of a battery, you need to know its capacity (Ah) and the specific gravity of the electrolyte. The formula is as follows: Battery weight = (Ah x SG x 1.2) + (terminal weight + case weight). However, this calculation is not necessary when choosing a replacement battery for your car.
