Add liquid-cooled energy storage capacitor

Is liquid cooling TMS suitable for a prismatic high-power lithium-ion capacitor (LIC)?

Nonetheless, the compactness of the liquid cooling TMS has paid less attention in the literature, which plays a vital role in the specific energy of ESSs. In this study, a liquid-based TMS is designed for a prismatic high-power lithium-ion capacitor (LiC).

Are lithium-ion capacitors suitable for high current applications?

For this aim,the lithium-ion capacitors (LiC) have been developed and commercialized,which is a combination of Li-ion and electric double-layer capacitors (EDLC). The advantages of high-power compared to Li-ion properties and high-energy compared to EDLC properties make the LiC technology a perfect candidate for high current applications.

What is a liquid cooling system?

The liquid cooling system is the most promising active cooling systemwhich generally uses water, ethylene glycol, or oil as a working fluid ,,,,... The cooling efficiency of liquid is far more extensive than air because of its higher heat transfer of coefficient.

How is the heat dissipation of a liquid cooling system determined?

Initial conditions and boundaries of the system were set in the CFD software to verify the precision of the experiments. The turbulent flow module for the liquid cooling system and the heat transfer module for the whole system are selected to generate the results of the heat dissipation of the system.

How to reduce the temperature of a LIC battery?

By increasing the thermal conductivity from 8 W/m·K to 13 W/m·K,the LiC cell temperature can be reduced from 32.5 °C to 32.4 °C,which the difference is not significant. Besides,by reducing the thermal conductivity of the TIM to 1 W/m·K,the temperature of the battery exceeds 35.5 °C.

Can a compact liquid-cooled TMS improve the temperature uniformity of a LIC battery?

In this work, a compact liquid-cooled TMS is proposed to enhance the temperature uniformity of the prismatic LiC battery by numerical method. Temperature uniformity in battery cooling is a significant key to validate the battery thermal management results.
