

What adhesives can be used in battery assembly?

Thermally conductive epoxy adhesives and potting compounds can be used in battery assembly to improve heat dissipation. Select adhesive and sealant systems offer protection from moisture, vibration, mechanical shock and extreme temperatures.

Why should you use adhesive & sealant for a battery?

Select adhesive and sealant systems offer protection from moisture, vibration, mechanical shock and extreme temperatures. The chemical resistance of epoxies and silicones can be further exploited to safeguard the battery from acids, bases, fuels, solvents and corrosive salts that it may be exposed to during the course of its operating life.

Why should you use Lohmann adhesive tape for lithium ion batteries?

Lohmann offers multifunctional adhesive tape solutions and high-precision die-cuts for thermal and electrical management of Li-Ion batteries. Safety, reliability and efficiency over the whole lifetime of the lithium-ion battery and hence the bonded joints are paramount.

What are master bond adhesives used for?

Master Bond adhesives play an important role in many battery applications, including thermal management, protecting batteries from environmental contaminants and weight-reduction. Thermally conductive epoxy adhesives and potting compounds can be used in battery assembly to improve heat dissipation.

Why do you need a tape for your EV battery?

For example, in an EV battery our tapes do not only efficiently connect the cells to the cooling system, but also prevent sensitive components from short circuits by realizing excellent grounding or, as part of a laminate, help protect against fire.

How can a PET film protect a battery from dielectric breakdown?

For the electrical insulation of sensitive battery components and effective protection against dielectric breakdown, Lohmann offers various single- or double-sided PET films. They can be applied to metal parts of the battery, e.g., on side panels, cell housing or battery case components.
