

What does a number mean on a battery Flash code?

Here,“all” indicates one flash of all four LEDs at the same time, and a number indicates one flash of that LED (counted from left). Reading direction is like lines of text. Spacing is for clarity only. What do these battery flash codes /blink codes indicate?

How do I know if my M18 battery has a flash code?

These flash codes are present on M18 batteries made before Aug 2015, and after March 2022 (see 2nd image). The codes are read by counting how many flashes occur at each position. There are 4 codes and all 4 LEDs will flash together between each code (e.g. 3 flashes of all LED before 3rd code, 4 flashes of all LED before 4th code).

What does a flashing error charge light mean?

However, in general, a flashing error charge light on a charger or battery could indicate issues such as over-discharge, over-temperature, or a faulty connection. To troubleshoot the issue, you can try resetting the battery by removing it from the tool and reinserting it.

How many times does a battery charge led Blink?

The battery charge LED blinks two times in amber color followed by a pause, and then blinks three times in white color. The power LED will pause for 3 seconds before the next cycle repeats itself again. The following table provides information about the amber and white blinking patterns with possible troubleshooting steps:

Do flashes work with XC batteries?

A Milwaukee support employee reportedly said “The flashes are of no significance.” (source) The answer should have added “to consumers”; however, as blink codes are of major significance to geeks :) This does not seem to work with newer (2.0, XC 4.0, etc.) batteries.

Why is my Milwaukee M18 battery flashing?

The flashing lights on a Milwaukee M18 battery serve as an important indicator of potential issues. When the battery flashes eight times, it is crucial to understand what this signifies--several potential causes for the flashing lights, including a low battery charge or a faulty connection.
