

Why is the battery charging indicator flashing orange-red?

If the battery charging indicator on your MSI laptop is flashing orange-red while charging, this may indicate a potential battery issue. Please refer to the following steps for troubleshooting: 1. Open MSI Center and select the "Feature Sets" option. Download and install the "System Diagnosis" module, then open it. 2.

When does the battery light turn on?

The battery light turns on only if the battery charge is between 0 and 94% when power is connected. To reduce the number of short-charge cycles and extend the service life of the battery, the notebook is designed to start charging only when the battery capacity is below 95%.

How do I know if my laptop battery is slow charging?

The battery is continuously infused with full power (fast charge), and then alternates with much less power (slow charge). During the slow charge stage of the cycle, the battery light might turn off and appear as though it is not charging. You can confirm that the battery is slow charging by checking the battery status in the taskbar.

How do I know if my Dell laptop battery is charging?

Solid Green- The battery is charging. Flashing Green - The battery is almost fully charged. If the computer is running on battery power, the battery light operates as follows. For specific information about your Dell laptop, see the User Manual of your Dell laptop. Flashing orange - The battery charge is low.

Why does the battery light not turn on if plugged in?

Therefore, even if an AC adapter is connected to the notebook, the battery does not charge if its charge level is at 95% or greater. If the AC adapter is plugged into the notebook and the battery charge level is 95% or greater, the battery light does not turn on until the battery charge level is 94% or less and the battery begins to charge.

What happens if the battery charge is low?

When the battery charge is low the orange light will blink slowly. When the battery charge level is critically low (less than 3%) the orange light will blink rapidly. But in your case it is fully charged. So please follow the steps below Remove the battery and unplug the AC adapter or the power cord from the computer.
