

The utility model provides a screening device of pasteur electric capacity. The screening device of the patch capacitor comprises two side plates; the two fixing plates are fixedly arranged on one side of the side plate; the two reciprocating mechanisms are respectively arranged on the two fixing plates; the first filter frame is arranged between the two fixing plates; the second filter ...

The utility model discloses a screening device for ceramic capacitor detection, relates to the technical field of ceramic capacitors, and aims to solve the problems that the existing screening device for ceramic capacitor detection is not integrated and intelligent enough, and is complicated due to the fact that the operation of workers is performed separately.

The utility model provides a screening device of pasteur electric capacity has and can effectively filter electric capacity, advantage that screening efficiency is high.

The invention discloses an automated inspecting and screening line for anti-pressure performance detection of capacitor shells. The automated inspecting and screening line comprises a ...

The capacitor screening device utilizes the gravity sensors to induce a capacitor so that capacitor screening is realized. The capacitor screening device continuously detects...

The utility model provides a capacitor box type testing, screening and packaging device which can be used for packaging capacitors in a tested load box, and is low in labor consumption and high in efficiency. The device comprises a test station, a screening station, a packaging station, a material supplementing station and a feeding device, wherein the material supplementing ...

Based in Taiwan, PINGOOD is a manufacturer of Capacitor Housing | mechanical components since 1982. Computer, electronic, electric machinery and automotive related component including rotary dampers, magnet latches, bushings, spacer supports, LED hardware, etc. Rotary damper, Push latch, Spacer support, Plastic fastener, Cable management, LED Housing, Bushing, ...

The high voltage screening device of a chip type capacitor contains a column ordering positioning section, a displacement suck head section, a clip testing section, and a material allotting and collecting section. The column ordering positioning section can order plural chip type capacitors to be a column and then the displacement suck head section sucks the ...

The utility model relates to the technical field of capacitor screening, and discloses a hybrid capacitor screening device which comprises a screening box and a vibrating mechanism arranged in the screening box, wherein a feeding mechanism is arranged on the top surface of the screening box; the vibrating mechanism

comprises a vibrating assembly, a first vibrator and a ...

The invention provides a rotating disc type test screening and braid packaging device and method for bulk capacitors, which can be used for testing and braiding capacitors, can keep electrodes of the capacitors downward in the test, and can braid the capacitors without overturning the capacitors after the test is finished, so that the adoption of an overturning mechanism can be ...

The utility model discloses a sieving mechanism for liquid aluminum electrolytic capacitor production line, including the sieve cabinet, the bobbing machine is installed to sieve cabinet bottom, the equal welding of sieve cabinet both sides inner wall has the fixture block, and fixture block top outer wall has seted up the connecting hole, the mounting hole has been seted up to ...
