# SOLAR PRO. EPS cabinet battery pack does not supply power

Why is battery important for EPS power supply?

Battery is the energy source for EPS emergency power supply during emergency power supply, and it is a key component that affects the reliability of EPS power supply. At present, almost all EPS use maintenance-free valve-regulated lead-acid batteries.

#### What is an EPS emergency power supply battery?

The EPS emergency power supply battery is used as an equipment for storing electric energy. It is composed of multiple batteries in series, and the size of the capacity determines the duration of power supply. But how many people know about the correct installation of EPS emergency power batteries?

#### How much power does an EPS battery supply?

This is a manual action and in a power cut, you must pull this switch before any power is supplied from the batteries. You'll also need to be careful about what you turn on when in EPS mode. The EPS can supply up to 5kwof power (approx. 20A in the UK).

#### What is the EPs function?

The EPS function gives you access to the battery to the battery power in the event of a grid /power failure,keeping important fixtures working like your lights,fridge,freezer and TV operating,i.e. depending on the size of the ESS unit,up to 90% of a 10kWh ESS power supply can be used in this situation.

#### What happens if an inverter is cut - EPs or no EPs?

1) EPS or no EPS, if there is a power cut, the inverter will shut down completely. This is to protect any power line workers that may be working on them. As you can imagine, without this, the power lines could become energised by solar producing homes and that could be an unwelcome shock to someone who will assume the power is off!

#### How much power does an EPS Inverter Supply?

You'll also need to be careful about what you turn on when in EPS mode. The EPS can supply up to 5kwof power (approx. 20A in the UK). If you draw more than this (say you have the oven on and then switch on the kettle and microwave),the inverter will overload and shut down requiring it to be reset in order to continue working again.
