

However, the supply and demand of cold energy is limited by time and region. Energy storage technology has been used as an effective method to improve the utilization by maintaining a balance between supply and demand. Cold thermal energy storage (CTES) technology has an important role to play by storing cold and releasing it at a right time [4].

A disassembly strategy in this work consists of three decisions: (1) the optimal disassembly sequence, (2) the optimal circular economy strategy for each component, and (3) ... -effective ...

The significance of high-entropy effects soon extended to ceramics. In 2015, Rost et al. [21], introduced a new family of ceramic materials called "entropy-stabilized oxides," later known as "high-entropy oxides (HEOs)". They demonstrated a stable five-component oxide formulation (equimolar: MgO, CoO, NiO, CuO, and ZnO) with a single-phase crystal structure.

The heat is delivered to the coolant through the thermal transfer structures between the battery and the coolant, and the heat flowing in the coolant will be discharged to an external condensing system ...
