How do I connect a solar panel to a charge controller?

Step 1: Hook up the battery to the charge controller. Connect the battery terminal wires to the charge controller **FIRST**, then connect the solar panel (s) to the charge controller. For detailed reasons, see [Should We Connect Batteries First Instead of Solar Panels to Charge Controllers?](#)

How do I charge a solar panel battery?

o Switch off or disconnect all loads. When power from PV is available the battery status will show Charging, and the Grid (the red box on the left of the overview) will be slightly fluctuating around 0W (zero watts). After configuring this item, the system will immediately start charging the battery. First, disconnect the mains.

Do solar panels need a charge controller?

A battery is a fragile thing and high voltage of solar panels can easily destroy it. A charge controller acts as a safety barrier between panels and a battery and should be a part of every home solar panel installation. In this article, we'll explain how to wire together solar panels, a regulator and a battery. But what does a battery fear?

Should I wire a solar panel controller to a battery?

It's advised to wire the controller to the battery first before connecting it to a solar array. Controllers often have to perform an initialization when they get connected to a battery during which the regulator evaluates the battery's state. If you connect the solar panel to a charge controller first, it may not initialize correctly.

How does a solar panel charge controller work?

If you have several solar panels, like on the diagram, the positive cable of one panel usually goes to the negative terminal of the adjacent one. Then, the negative cable of the first panel and the positive cable of the last panel go into the charge controller.

How to wire solar panels together?

Wiring solar panels together can be done with pre-installed wires at the modules, but extending the wiring to the inverter or service panel requires selecting the right wire. For rooftop PV installations, you can use the PV wire, known in Europe as TUV PV Wire or EN 50618 solar cable standard.
