

What is a fire alarm back-up battery?

Back-up batteries come in various sizes and capacities, depending on the needs of the fire alarm system they are powering. They are connected to the fire alarm control panel and are continuously monitored to ensure they are charged and ready to provide power in case of an emergency.

Do fire alarm systems need batteries?

By law, fire alarm systems must be provided with certified batteries to operate during any emergency. There are a few options for choosing a reliable power supply and some calculations are necessary to ensure that the fire alarm system has sufficient backup power in the event of a power outage.

Do fire alarm systems need a standby battery?

All fire alarm systems must be fitted with a standby supply and this is achieved by using Sealed Lead Acid (SLA) batteries. The standards state that in the event of a mains supply failure, the backup batteries should be able to run the system for a minimum of 24hrs, followed by 30 minutes in full alarm condition (all sounders running).

Where is a backup power supply located in a fire control panel?

These are typically located within the fire alarm control unit enclosure or in a nearby power supply unit. Although a prevalent form of backup power supply, they need to meet specific requirements to be fit for purpose. All batteries installed in fire control panels must be as per recommendation of the fire panel manufacturer.

What type of battery does a fire alarm use?

Batteries are a common way to provide a secondary power supply, and the most widely-used type is a valve-regulated sealed lead-acid battery. These are typically located within the fire alarm control unit enclosure or in a nearby power supply unit.

How do I choose a reliable power supply for my Fire Alarm?

There are a few options for choosing a reliable power supply and some calculations are necessary to ensure that the fire alarm system has sufficient backup power in the event of a power outage. Batteries are a common way to provide a secondary power supply, and the most widely-used type is a valve-regulated sealed lead-acid battery.
