

What is an electric high voltage heater (HVH)?

The electric High Voltage Heater (HVH) is the ideal heating system for battery electric vehicles (BEV) and plug-in hybrids (PHEV). It converts direct current (DC) electric power into heat with practically no losses. The HVH is offered with heat outputs of 5 kilowatt (kW), 7 kW and 10 kW.

What is a high voltage coolant heater?

Initially designed to heat the coolant in EVs' standard HVAC module, and improve cabin comfort, High Voltage Coolant Heaters are also used to heat up the battery. They have now become mandatory for battery pre-heating in cold weather conditions.

What is a high voltage heating system?

It achieves a heating capacity of up to 7 kW and is based on robust tubular heating technology. The high-voltage heating system can be operated in a voltage range of 195 to 450 V DC and transports up to 14 liters of fluid per minute.
