

What metric should a domestic EPC be based on?

The CCC also recommend a cost metric remain based upon the EER or a similar mechanism. Energy costs vs energy performance: The use of the EER as the headline metric for domestic EPCs means that the certificate treats regulated energy costs at a point in time and energy performance as synonymous.

What does a domestic EPC report?

The domestic EPC also reports an annual delivered energy metric in the form of estimated kilowatt-hour consumption of energy for space heating and for hot water. Figure 3 - Left: Section of a domestic EPC showing the rating of some features of the dwelling, and the estimated annual primary energy use in kWh/m<sup>2</sup>;

Why do we need an EPC?

The EPC system now needs to evolve to effectively support the transition of our homes to net zero. Energy Performance Certificates (EPCs) were first introduced to inform home purchase or renting decisions and to provide simple energy efficiency recommendations.

What is the difference between a surveyor and an EPC?

A surveyor with specialist knowledge may understand the energy performance of these structures, whereas the software used to produce EPCs does not. Instead, the DEA is obliged to include the property in the closest category available to them.

Does the RICS Home survey standard require commentary on Energy Performance Certificates?

The RICS Home Survey Standard requires commentary on energy performance certificates in level 2 and 3 reports. What advice can surveyors offer to best support their clients?

What is an EPC rating?

Currently, the headline EPC rating is the Energy Efficiency Rating (EER). This is an energy cost rating - an indicator of the comparative cost to heat and light the home relative to other homes of the same floor area. The EPC recommends improvements that can deliver a better EER.

The more energy efficient a home is, the less it will cost to heat and light. Also, energy efficient homes have lower CO<sub>2</sub>, so it's good for your budget and for your carbon footprint. Some of the recommendations on the EPC need a little bit of investment and require you to be a homeowner.

The BRE report [footnote 17] calls for a smart energy metric to report on the combined performance of installed home technologies such as energy storage, controls and ...

energy storage video survey epc What is energy storage technology? del built on functions on power and heat flows. Energy Storage Technology is one of the major components of ...

Furthermore, the pricing landscape for energy storage systems and Engineering, Procurement, and Construction (EPC) services has followed suit, experiencing a decline. In the first half of 2023, the average prices of two-hour energy storage systems and EPC services dropped by nearly 27% and 11% respectively, in comparison to the figures recorded ...

Energy savings in a home with an EPC Rating B are substantial and multifaceted. Such properties use energy more efficiently, meaning less is required for heating, cooling, and powering appliances. This efficiency is primarily due to enhanced insulation, efficient heating systems, and energy-saving windows and doors.

6 ???&#0183; Introduction This chapter discusses findings on energy efficiency ratings and heating systems and how this differs by tenure.

EPCs and the Home Survey Standard With the introduction of the mandatory RICS Home Survey Standard (Professional Statement), which came into effect on 1 March 2021, RICS members ...

Among the cryptic documents lies the EPC, your home's secret energy report card. This quick guide cuts through the jargon, explaining what your EPC means, how to get one, and, best of all, how to make your house an ...

Learn how alternative heating systems impact the EPC. With a reduction in the use of fossil fuels and a more focussed approach to carbon reduction it has caused a big shift in peoples decisions on heating systems for their homes ...

Pumped storage is still the main body of energy storage, but the proportion of about 90% from 2020 to 59.4% by the end of 2023; the cumulative installed capacity of new type of energy storage, which refers to other types of energy storage in addition to pumped storage, is 34.5 GW/74.5 GWh (lithium-ion batteries accounted for more than 94%), and the new ...

Consider investing in energy-efficient upgrades, such as better insulation, modern heating systems, or renewable energy installations, which can boost your EPC rating and future-proof your home. Regular maintenance and servicing of existing systems, like boilers and ventilation, ensure they operate efficiently, contributing positively to your assessment.
