What is the power of a charging pile?

**Power and compatibility** The power of a charging pile refers to the maximum amount of electrical energy that can be output per hour, in kW or "kilowatts". AC charging piles are generally divided into 3.5kW, 7KW, 11kW, and 22KW specifications according to power.

What is an AC charging pile?

Therefore, the AC charging pile can be understood as a set of connection and control equipment with a protection system. It implements a unified electrical protocol (national standard regulations) to communicate with the on-board charger to achieve functions such as opening and closing the scheduled charging.

How many volts does an AC charging pile need?

AC charging piles are generally divided into 3.5kW, 7KW, 11kW, and 22KW specifications according to power. The more precise definition of the 7KW specification is 220V/32A/7kW, which is also the most common specification at present. Charging piles above 7kW require a 380V meter.

What meter do I need for a 7kW charging pile?

Charging piles above 7kW require a 380V meter. As mentioned above, the choice should be based on the power of the vehicle's own charger, while considering expansion needs such as changing vehicles. The mainstream new energy vehicle brands now all support 7KW charging piles.

What information does a charging pile display?

**Information display screen** Some charging piles are equipped with information display screens, which can display information such as voltage, current, real-time power, temperature, charging time, etc. Some can also display the working status of each phase of the three-phase charging pile.

How to choose a 22kW charging pile?

So if you have two cars at home, or consider future expansion, you can consider choosing a 22KW charging pile. In short, you must choose a charging pile that is not less than the power of the on-board charger and is compatible. Note that charging piles above 7kW require a 380V meter.
