SOLAR PRO. How to change solar power

Can I switch energy suppliers if I have solar panels?

First off, you can still switchgas and electricity suppliers when you have solar panels or generate your own renewable energy in another way -- but you must switch to an eligible supplier. When it comes to your Feed-In tariff, it's Ofgem that sets the rates for the schemes.

How do I get a solar power switch?

You may need to fill in an application form, and confirm your request in writing. Your new licensee will then get in touch with your current supplier and sort out a date for the switch. They'll also arrange a "generation reading", to make sure they have accurate figures for your solar panel energy output.

Do I need more solar energy?

Even if your solar system is performing correctly and efficiently, a change in circumstances may mean you need more energy. Also, you may want to go green and use as much solar energy as you can. An additional member in the household, buying a new appliance or switching to an electric car could mean you need to do something to up your output.

How does solar energy work in the UK?

Batteries are the most common method of storing solar energy for electricity. In home solar thermal systems, solar panels are used to heat water, which is also a form of clean energy storage. The UK isn't an especially sunny country. Even so, UK government targets suggest that solar could generate just over a fifth of electricity.

What is solar power & how does it work?

Solar power is a type of renewable energy that comes from sunlight. It can be installed on roofs or in rows or clusters on land. Solar could provide up to 70% of clean, cheap electricity for homes in the UK. Solar power harnesses energy from the sun creating clean, renewable energy.

Do solar panels produce energy all the time?

Solar panels don't produce energy all the time, because they take energy from the sun, and the sun doesn't always shine. But with some supporting technology they can still be a reliable source of power. Batteries are the most common method of storing solar energy for electricity.

We explain what tests you can perform yourself to help idenify what is the best way to upgrade your existing solar system, if you need to at all!
