

# How to charge the energy storage charging pile in the microgrid system

How can microgrids help EV users?

By arranging to charge piles of different types and capacities in different microgrid areas and formulating different charging price strategies, it can satisfy the differentiated demands of EVs users, promote EVs users to reduce charging costs through orderly charging, and help the rapid development of electric vehicles.

How do fast/slow charging piles help EVs in a multi-microgrid?

Considering the power interdependence among the microgrids in commercial, office, and residential areas, the fast/slow charging piles are reasonably arranged to guide the EVs to arrange the charging time, charging location, and charging mode reasonably to realize the cross-regional consumption of renewable energy among multi-microgrids.

How does microgrid operation cost affect EV charging costs?

The reduction in microgrid operation costs is directly reflected in the fast/slow charging prices, which greatly reduce the EVs charging cost. Although there are also certain transfer power consumption costs and queuing time costs, the total cost of EVs is reduced by 55.2% compared with scenario 3 and 44.3% compared with scenario 1.

How to control the charging/discharging of the microgrid storage system?

The proposed control methodology for controlling the charging/discharging of the microgrid storage system has been numerically implemented and tested on a simulated MATLAB model of the grid-connected microgrid using real location data. This model has been run online using the main software of the control methodology.

Does a two-layer EV charging system improve microgrid performance?

Therefore, the proposed two-layer model realizes the optimal configuration of fast/slow charging piles in multi-microgrid areas, effectively reduces the EVs charging cost, reduces the impact of the EVs charging load on microgrids, improves the operation safety of microgrids, and increases social welfare. Table 8.

How to plan the capacity of charging piles?

The capacity planning of charging piles is restricted by many factors. It not only needs to consider the construction investment cost, but also takes into account the charging demand, vehicle flow, charging price and the impact on the safe operation of the power grid (Bai & Feng, 2022; Campaa et al., 2021).
