

How to compare the power of electric car batteries

How important is a battery size for an electric car?

As electric cars grow in popularity, car buyers are quickly having to come to terms with new jargon, including battery size. The battery is one of the most important components of any electric car. It plays a crucial role in determining the range of an EV, as well as its charging time, overall performance and initial purchase cost.

Why should you compare electric car batteries?

By doing so, you can make an informed decision about the type of electric car that best suits your needs. Comparing electric car batteries also helps manufacturers improve their battery systems, resulting in more efficient and capable electric cars.

How important is a battery in an electric car?

The battery is one of the most important components of any electric car. It plays a crucial role in determining the range of an EV, as well as its charging time, overall performance and initial purchase cost. Different models use different size batteries, but bigger isn't always better, as we'll explain in this guide.

What is an electric car battery?

The electric car battery is the key source of 'juice' to power the electric drive unit and vehicle. It is a large, high-voltage energy storage block that's positioned underneath the vehicle, similar to a fuel tank.

Which battery is best for an electric car?

Lithium-ion batteries are the most common and offer the best range, weight, and charging time. Nickel-metal hydride batteries are less expensive but heavier and less efficient. Lead-acid batteries are the oldest technology and have the shortest lifespan, making them less popular for electric cars.

How much power does a battery give a car?

Recently announced by CATL that its batteries have a density of over 290Wh/litre for LFP chemistry and over 450Wh/litre for NCM chemistry. Power gives acceleration to the car and maintains it at a given speed. Though mechanically power is the product of torque and rpm. But in the electrical domain power is the product of voltage and current.

[1] Whilst we recommend the battery for this car is charged to 80% to help optimise the life of your battery, the electric range figure shown is the WLTP figure after the battery had been fully charged to 100%. WLTP figures are ...
