

How to connect the battery junction box production line

What is a battery junction box (BJB)?

The battery junction box (BJB) establishes the connection and also the resolution of the connection between the vehicle's high-voltage system and the AC/DC charging components. The BJB is usually located inside the battery, but in some cases it can also be located outside the vehicle, in which case it is simply referred to as the junction box (BJ).

What is a HV battery junction box?

The HV battery junction box brings together the measurement, control and connections of the battery high voltage (HV) system. Therefore, it would normally contain: This often also includes the master BMS. Thus allowing the control and power distribution to be all housed in one central location.
