Learn about essential maintenance tips and safety precautions to maximize your system's ...

The cost to charge your electric car with grid energy, will vary depending on your energy tariff and car battery size. For example, if your tariff is 30p per kWh and your battery is 100 kWh, the cost to fully charge your car would be approximately £30. You can estimate these costs by multiplying the tariff by the battery size, and dividing this by 100 (i.e. $30 \times 100 = 300 / \dots$

Before you install your EV charger, think about where you like to park your car and in what direction so all the parts line up. Next, consider your garage's layout. If you have a two-car garage, you might want to install the ...

Pros Free or reduced cost of travel. According to NimbleFins, motorists spend an average of £1,288 a year running a petrol car and £1,795 running a diesel car. With solar panels, you can avoid these travel fees. The ...

These days it's commonplace for homeowners and businesses to tap into the "free energy" provided by the sun. Even in the UK, where we have just 1493 hours of sunlight per year 10, a ...

This should reduce your energy bills - and your carbon footprint. For example, if you're not at home during the day to use the energy your solar panels are generating, having a battery will enable you to store (and later use) energy from your solar panels. A solar battery means you can take advantage of cheaper electricity.
