

How do you get water out of a charging port?

The most reliable way to get water out of a charging port is to turn off your phone and allow it to air dry completely. While getting your phone wet can be scary, many modern smartphones are now water-resistant or waterproof.

How do I remove a charging port from the main board?

Disconnect connectors from the Main board using Opening tool. and lift Charging port away from assembly using tweezers. Before proceeding, ensure that no debris or separated screw remains inside the device. *Pause the video while completing each step, then resume when ready to continue.

How do you fix a bad phone charging port?

Set your phone somewhere with good airflow for 1-2 hours. Leave your phone near an open window, or in a room with a running fan, with the charging port exposed. Let it air dry for 30 minutes, or up to 24 hours, until the problem is resolved.

How do you clean a charging port?

Spray away loosened debris with more compressed air. Hold the device so that the charging port faces downward toward your working surface--this will allow the dirt to fall freely from the port to the surface instead of getting stuck inside. Spray a few quick bursts inside the port again until it is clear of debris.

How do you charge a phone without a charger?

If you have another charging cable, give that one a try. Tap the phone with your hand, facing the charging port downward. Hold the device with the charging port facing the ground, then lightly tap it downward against your palm. This helps drain any excess fluid from the port.

How do you clean a battery port on a Samsung phone?

Hold a compressed air canister 4-5 in (10-13 cm) away from the port, then blow into the port in 1 to 2-second bursts to dislodge debris. Run a toothpick or lightly alcohol-dampened cotton swab inside the port to remove gunk. If charging problems persist, take your phone to an IT specialist.
