

Do solar panels need to be activated?

Yes, solar panels need to be activated to start generating electricity. Activation involves the necessary steps to connect the solar system to the grid and initiate the conversion of solar energy into usable power. How do I know if my solar panels are turned on?

How do I connect my solar system to the utility grid?

Connecting your solar system to the utility grid is a critical step in the activation process. Here's what you need to do: **Grid Connection Point:** Identify where your solar system connects to the utility grid. This is usually located near your main electrical panel or utility meter.

How do you disconnect a solar system from a utility grid?

Turn off the AC disconnect switch to disconnect the solar system from the utility grid. **Breaker Switch:** Locate the breaker switch dedicated to your solar system. Flip the breaker switch to the "off" position to cut off the power supply from the solar panels.

Do solar panels generate electricity?

That said, the rate at which solar panels generate electricity varies depending on the amount of direct sunlight and the quality, size, number and location of panels in use. Even in winter, solar panel technology is still effective; at one point in February 2022, solar was providing more than 20% of the UK's electricity.<sup>1</sup>

How does a solar PV system work?

Solar PV panels - convert sunlight into electricity. **Inverter** - this might be fitted in the loft and converts the electricity from the panels into the form of electricity which is used in the home. **Generation meter** - records the amount of electricity generated by the solar PV system.

How do I keep my solar panel system running well?

You don't need to do much to keep your solar panel system running well. The main thing is to keep nearby trees well-trimmed to minimise shading where possible. In the UK, rain will clean your panels if they're tilted at 15 degrees or more.
