

They carry out this work in 18 joint programmes (JPs), of which TNO coordinates the programme Energy Efficiency in Industrial Processes, which published the white paper Industrial Thermal Energy Storage, Supporting the transition to ...

On 18 October 2024, The Energy Storage Global Conference 2024 was organized by The European Association for Storage of Energy (EASE), and over 400 energy storage stakeholders gathered to discuss the next steps required in technologies, markets and support policies.

At COP29, energy storage claimed center stage, transforming its role from a supporting technology to the backbone of renewable energy systems. No longer a supplementary solution, energy storage now stands as a critical enabler of 24x7 renewable power, stabilizing grids, reducing fossil fuel dependence, and accelerating global decarbonization efforts.

In 2017, China's national government released the Guiding Opinions on Promoting Energy Storage Technology and Industry Development, the first national-level policy in support of energy storage. Following the ...

Held alongside the Battery Show Expo Europe in Stuttgart, Energy Storage Germany spotlights Germany's rapid ascent in the European storage sector. Once driven by residential demand, utility-scale projects are now surging, with ...

This report encompasses an updated summary of the current technologies; support available internationally for storage technologies; energy storage projects deployed at present in the UK; and a discussion of the current key issues for the sector, before offering some conclusions.

"Ultimately, energy storage reduces the use of gas power plants in the energy system," the document reads, but it appears to stop well short of offering the sort of coherent strategy needed to support the massive growth in ...

The backing of new Electricity Market Design proposals by the European Parliament is welcome, but the plan still falls short in its support for energy storage technologies. That's the view expressed by two influential European trade groups, the European Association for Storage of Energy (EASE) and the Energy Storage Coalition.

To support the global transition to clean electricity, funding for development of energy storage projects is required. Pumped hydro, batteries, hydrogen, and thermal storage are a few of the ...

Energy storage is one of the most important technologies and basic equipment supporting the construction of the future power system. It is also of great significance in promoting the consumption of renewable energy, guaranteeing the power supply and enhancing the safety of the power grid. ... According to data from the Energy Storage Industry ...

The White Paper "Industrial Thermal Energy Storage - Supporting the transition to decarbonise industry" has been produced by the European Energy Research Alliance's Joint Programme on Energy Efficiency ...
