

Interpretation of Lithuania's energy storage security policy document

Does energy security affect Lithuania's energy strategy?

With virtually no primary energy resources of its own, Lithuania progressed from a pro-nuclear to a renewable national energy strategy in just one decade. Based on the revised Copenhagen Securitization School, this article analyses energy security perceptions as a factor that determines the recent turn in Lithuanian energy strategy.

Why is electricity storage important in Lithuania?

Lithuania's system of electricity storage facilities is essential to ensure the security of Lithuania's energy system and its ability to operate in isolated mode.

Why is the energy sector important in Lithuania?

72. The energy sector represents a significant part of the Lithuanian economy, and some state-owned energy enterprises and facilities have a strategic significance for the national security of Lithuania, ensuring reliable energy supply and opportunities for the development of an efficient energy market.

Who manages Lithuania's electricity storage facilities?

At the end of July 2021, the Government of the Republic of Lithuania appointed Energy cells, a company of the EPSO-G Group, as the operator of the instantaneous isolated operation electricity reserve for Lithuania's electricity storage facilities and entrusted it with the management of the electricity storage facilities system.

How secure is Lithuania's electricity supply?

Security of electricity supply in Lithuania (and the Baltic States in general) is threatened by being the only Member States with electricity systems still operating in the IPS/UPS system. This system's frequency is managed centrally from a dispatching centre located in Moscow.

How will Lithuania's energy storage system work?

The energy storage system, which will provide Lithuania with an instantaneous isolated operation electricity reserve until synchronisation with the continental European networks (CEN), will be used after synchronisation for the integration of energy produced from renewable sources.
