

Are energy storage facilities safe?

These established safety standards, like NFPA 855 and UL 9540, ensure that all aspects of an energy storage project are designed, built, and operated with safety as the highest priority. Energy storage facilities are monitored 24/7 by trained personnel prepared to maintain safety and respond to emergency events.

How is the energy storage industry promoting safety?

The energy storage industry is continually promoting safety, encouraging localities across the country to adopt robust safety standards, collaborating with first-responder groups and fire service organizations, and sharing lessons learned and safety resources. Why is safety important in energy storage systems?

Safety is fundamental to the development and design of energy storage systems. Each energy storage unit has multiple layers of prevention, protection and mitigation systems (detailed further in Section 4). These minimise the risk of overcharge, overheating or mechanical damage that could result in an incident such as a fire.

Are battery energy storage systems safe?

Safety incidents are, on the whole, extremely rare due to the incorporation of prevention, protection and mitigation measures in the design and operation of storage systems. A common concern raised by some communities living close to sites identified for battery energy storage systems is around the risk of fire.

What are the safety requirements for electrical energy storage systems?

Electrical energy storage (EES) systems - Part 5-3. Safety requirements for electrochemical based EES systems considering initially non-anticipated modifications, partial replacement, changing application, relocation and loading reused battery.

What are international standards for energy storage?

Internationally developed standards are often mirrored by the BSI in the UK and so become UK standards. They form the bulk of the technical standards related to energy storage. They are developed through relevant working groups in organisations such as the IEC, CENELEC, or ISO and present international consensus on what standards should apply.
