Are lithium-based solutions cheaper than lead-acid solutions?

In summary, the total cost of ownership per usable kWh is about 2.8 times cheaper for a lithium-based solution than for a lead acid solution. We note that despite the higher facial cost of Lithium technology, the cost per stored and supplied kWh remains much lower than for Lead-Acid technology.

How is a lithium ion compared to a lead-acid battery?

The costs of delivery and installation are calculated on a volume ratio of 6:1 for Lithium system compared to a lead-acid system. This assessment is based on the fact that the lithium-ion has an energy density of 3.5 times Lead-Acid and a discharge rate of 100% compared to 50% for AGM batteries.

What does a high DoD battery mean?

A higher DoD means more of the battery's stored energy can be used, affecting its lifespan and efficiency. For example, if you purchase battery storage that has a capacity of 6 kW energy storage and 80% DoD, it should be charged when it reaches 5 kW used to maximise the longevity of the battery.

How often should a lead-acid battery be replaced?

Based on the estimated lifetime of the system, the lead-acid battery solution-based must be replaced 5 times after initial installation. Lithium Iron phosphate solution-based is not replaced during operation (3000 cycles are expected from the battery at 100% DoD cycles)
