

What is a lead acid battery?

Lead acid batteries are rechargeable batteries consisting of lead plates with a sulfuric acid/water electrolyte solution. Car batteries and deep cycle batteries use lead acid technology. All batteries have positive and negative terminals, marked (+) and (-) respectively, and two corresponding electrodes.

Are sealed lead-acid batteries maintenance-free?

In sealed lead-acid batteries (SLA), the electrolyte, or battery acid, is either absorbed in a plate separator or formed into a gel. Because they do not have to be watered and are spill-proof, they are considered low maintenance or maintenance-free. SLAs typically have a longer shelf life than flooded batteries and charge faster.

How long do lead-acid batteries last?
