How do you wire a smart lithium battery to a BMS?

Victron Energy's Smart lithium batteries have two short, black wires attached to them with 3-conductor M8 connectors. You'll begin by wiring them together (daisy chained) with these short wires and then use an extension cord (available in various lengths) to wire the string of batteries to the BMS you are using.

Which BMS should I use for my smart lithium battery?

When using Victron Energy's Smart Lithium batteries that require an external BMS, we typically use either the "simple" and affordable VE.Bus BMS or, in some cases, the more expensive but "fancier" (more feature-rich) Lynx Smart BMS. This post covers both and includes a free wiring diagram for both as well.

How do you connect multiple batteries in parallel?

The correct way of connecting multiple batteries in parallel is to ensure that the total path of the current in and out of each battery is equal. Use busbars. Connect using positive and negative posts. Ensure equal cable length from each post to each battery. Connect halfway. Ensure all cables have the same thickness. Connect diagonally.

How do I install a power station?

Decide on your installation location, and slide the power station into place to assess fit. Ensure it has adequate room and won't be damaged by (or cause damage to) anything in the vicinity. Once you have confirmed your exact installation spot, remove the battery box leaving the battery tray in place.
