

Lithium battery raw materials in the Midwest

Is the lithium-ion battery supply chain sustainable?

RMP will remain grounded in the reality the lithium-ion battery supply chain is dominated by China as far out as we can see. Until we are making our own batteries in the USA with North American raw materials & refined materials & recycled materials, the lithium-ion battery supply chain is not really green or sustainable.

What materials are used to make lithium ion batteries?

Critical raw materials used in manufacturing Li-ion batteries (LIBs) include lithium, graphite, cobalt, and manganese. As electric vehicle deployments increase, LIB cell production for vehicles is becoming an increasingly important source of demand.

What is a lithium ion battery?

The challenge is even greater with clean energy technologies, such as light-duty vehicle (LDV) lithium-ion (Li-ion) batteries, that account for a very small, although growing, fraction of the market. Critical raw materials used in manufacturing Li-ion batteries (LIBs) include lithium, graphite, cobalt, and manganese.

Which country dominates the lithium-ion battery supply chain?

China dominates the Li-ion battery supply chain as RMP has written about before. The IEA consistently publishes information about lithium-ion batteries telling us the entire supply chain runs through China in a major way and the USA is decades behind China in terms of mining, raw material processing, and electrode manufacturing.

Why is the demand for lithium-ion batteries increasing?

The demand for raw materials for lithium-ion battery (LIB) manufacturing is projected to increase substantially, driven by the large-scale adoption of electric vehicles (EVs).

What is the lithium-ion battery supply chain map?

RMP has added a new GIS database to our map library called the Lithium-ion Battery Supply Chain Map. In April of 2024, RMP set out to understand the data underpinning the nascent lithium-ion battery supply chain in North America. Each year, more batteries are being manufactured helping to electrify our vehicle fleet and more growth is projected.
