What is eplcr LV capacitor?

E Series Low Voltage Capacitor Type EPLCR LV capacitors feature the Latest design for power quality solutions, widely used in a variety of applications and make a simple, economical reliable source for reactive power on electric power systems for improving power factor.

What causes a low voltage capacitor?

This effect may be caused by the usage of non-linear devices (generation of higher harmonics), low short-circuit power of voltage sources (voltage fluctuation), etc. We recommend using capacitors with higher nominal voltage than the nominal voltage of the distribution network.

Which capacitors should be used in a 400 volt distribution network?

We recommend using capacitors with higher nominal voltage than the nominal voltage of the distribution network. In a 400 V distribution network, we recommend capacitors with a nominal voltage of 440 V and capacitors with a nominal voltage of 480 V for detuned power factor correction with reactors.

Why do you need a capacitor unit?

Capacitor units are building blocks for any power quality solution to mitigate issues like low power factor, voltage variations and harmonics. Hitachi Energy's CLMD range of capacitors offers such rugged and flexible building blocks to build such solutions for most challenging environments.
