How do you prevent a lead acid battery from corroding?

To prevent this, charge lead acid batteries for a long time at a low charging current. Battery cell terminals are prone to corrosion, especially at the bolted connections. To prevent this, regularly check bolt tightness and cover connections with petroleum jelly. Replace any corroded cells immediately.

Can lead acid batteries be reconditioned?

Lead acid batteries can sometimes sustain damage that cannot be repaired through reconditioning. A common issue is sulfation,where lead sulfate crystals accumulate on the battery plates. Severe sulfation may reduce the battery's capacity beyond recovery,making replacement necessary.
