

The share of renewables in the global primary energy mix has increased to 5% [1], [2] is anticipated to reach 70-85% for limiting the global warming pathway to 1.5 °C above pre-industrial levels [3]. However, renewables require specific systems to improve resource and end-use efficiencies, grid stability, load management, and supply and demand mismatch due ...

a promising solution to supply power to each electronic sensing ... consumption is fully compensated by energy harvesters. Self-charging power systems (SCPSs) refer to power devices integrated with energy harvesting and energy storage devices.<sup>3</sup> A power management circuit is also typically indispensable, which may deal with AC-DC conversion ...

On one hand, the unstable electricity generated by energy harvesters can be saved and accumulated to provide a stable power supply in a certain period; on the other hand, energy ...
