# **SOLAR** PRO. Modified portable lead-acid battery

#### What is a rechargeable lead acid battery?

Rechargeable Lead-Acid battery was invented more than 150 years ago, and is still one of the most important energy sources in the daily life of millions of peoples. Lead-Acid batteries are basically divided into two main categories : (1) Starting-Lighting-Ignition (SLI) batteries, and (2) deep cycle batteries.

#### What is lead acid battery?

It has been the most successful commercialized aqueous electrochemical energy storage systemever since. In addition, this type of battery has witnessed the emergence and development of modern electricity-powered society. Nevertheless, lead acid batteries have technologically evolved since their invention.

#### Are lead acid batteries a viable energy storage technology?

Although lead acid batteries are an ancient energy storage technology, they will remain essential for the global rechargeable batteries markets, possessing advantages in cost-effectiveness and recycling ability.

#### What is Nam in lead acid batteries?

NAM in Lead-Acid batteries consists of two parts; interconnected network of lead crystals,known as skeleton network,and separate lead crystals deposited on the skeleton network,known as energetic structure. These two components play an important role in energy storage of the negative pole of the Lead-Acid battery.

#### Why is the cycle life of SLI lead acid batteries important?

Thus, improving the cycle life of the SLI Lead-Acid batteries ensures a better service to the consumer with solely providing all the power needs of a vehicle. Currently, most of the commercially available Lead-Acid batteries fail after a while like any other type of the battery.

### Do lead-acid batteries improve cycle life?
