

Can sodium-ion batteries compete on price?

For the batteries to compete on price, specifically against a low-cost variant of the lithium-ion battery known as lithium-iron-phosphate, the study highlights several key routes for sodium-ion battery developers. Most important is to increase energy densities without the use of critical minerals.

Are sodium-ion batteries a low-cost option?

Still, achieving a low-cost contender may be several years away for sodium-ion batteries and will require technological advances and favorable market conditions, according to a new study in Nature Energy. Sodium-ion batteries are often assumed to have lower costs and more resilient supply chains compared to lithium-ion batteries.

Will sodium-ion batteries be cheaper than lithium-ion batteries?

The global supply of lithium has grown more quickly than demand since 2022, leading to lower prices. Researchers and analysts expect that sodium-ion batteries will have a cost advantage over lithium-ion in the long run.

Will sodium-ion batteries become more expensive in 2023?

IEA's report states, "In 2023, leading battery manufacturers announced expansion plans for sodium-ion batteries, such as BYD, Northvolt, and CATL, which initially sought to reach mass production by the end of the same year. If brought to scale, sodium-ion batteries could cost up to 20% less than incumbent technologies."

Are sodium-ion batteries scalable?

If brought to scale, sodium-ion batteries could cost up to 20% less than incumbent technologies." Despite their promise, lithium prices and supply chain challenges heavily influence the development of sodium-ion batteries, which could impact their near-term scalability.

Are nanotechnology-enhanced Li-ion batteries the future of energy storage?

Nanotechnology-enhanced Li-ion battery systems hold great potential to address global energy challenges and revolutionize energy storage and utilization as the world transitions toward sustainable and renewable energy, with an increasing demand for efficient and reliable storage systems.

Some of our test planes have flown for 40-60 minutes with a li-ion battery and mixed flying. Rolls with the NG are on axis, stalls simply drop the nose, and it can practically ...
