## SOLAR PRO. New magnesium battery energy storage technology

## Could magnesium batteries power EVs?

With relatively low costs and a more robust supply chain than conventional lithium-ion batteries,magnesium batteries could power EVsand unlock more utility-scale energy storage,helping to shepherd more wind and solar energy into the grid. That depends on whether or not researchers can pick apart some of the technology obstacles in the way.

Could a new magnesium ion battery revolutionize the industry?

Recently featured in Science Advances under the title "Next-generation magnesium-ion batteries: The quasi-solid-state approach to multivalent metal ion storage," the new Mg-ion battery has the potential to revolutionize the industry. "It is a game-changing development," stated Professor Leung.

What is the energy density of a magnesium ion battery?

A typical magnesium-air battery has an energy density of 6.8 kWh/kgand a theoretical operating voltage of 3.1 V. However, recent breakthroughs, such as the quasi-solid-state magnesium-ion battery, have enhanced voltage performance and energy density, making the technology more viable for high-performance applications. 7. What are rechargeable magnesium batteries (RMBS)?

Benefiting from higher volumetric capacity, environmental friendliness and metallic dendrite-free magnesium (Mg) anodes, rechargeable magnesium batteries (RMBs) are of great importance to the development of energy storage technology beyond lithium-ion batteries (LIBs).

What is a quasi-solid-state magnesium-ion battery?

We designed a quasi-solid-state magnesium-ion battery (QSMB) that confines the hydrogen bond network for true multivalent metal ion storage. The QSMB demonstrates an energy density of 264 W·hour kg -1,nearly five times higher than aqueous Mg-ion batteries and a voltage plateau (2.6 to 2.0 V),outperforming other Mg-ion batteries.

Are magnesium batteries more energy dense than lithium-ion batteries?

"The theoretical energy density [of magnesium batteries] is at least comparable to lithium-ion batteries, and there is the potential to realize a higher energy density than lithium because there are double the electrons for every individual magnesium ion, compared to lithium," he said.
