

The subject of the inductance of energy storage capacitors is often poorly understood, and inductive extended-foil capacitors are frequently and incorrectly called non-inductive. This paper provides proven formulas for the inductance of all common capacitor geometries, including appropriate derivations.

capacitor/ Pitch) is very smaller, a very low inductance is formed across the capacitor. That is why; this type of capacitor is called Non-Inductive type capacitors. The Non-Inductive capacitors have to undergo End spray process; this process makes the capacitors 25 to 30% more expensive than Inductive capacitors for a same capacitance value.
