

What types of capacitors does GE Supply?

GE supplies Low Voltage and Medium Voltage fixed and automatically switched capacitors for power factor correction and harmonic mitigation, in the range of 240V through 13.2kV. GE also supplies active filtering equipment and line/load reactors for specific line and load applications.

Do power factor correction capacitors increase harmonic voltage and current?

The application of power factor correction capacitor systems can create unwanted increases in harmonic voltage and current unless the capacitors are properly applied with reactors, in series with the capacitor, to suppress harmful harmonics.

Should GE Capacitors be rated at a higher voltage?

In some cases, where harmonic currents are excessive, the use of capacitors rated at the next higher voltage may be required. In most cases, GE capacitors are run at rated voltage and will maintain their twenty year life expectancy. The GE Power Quality Engineering Department is available to assist you with system analysis.

What is a gemtrap power factor correction capacitor?

GE's line of fixed harmonic suppression capacitors permits the installation of power factor correction capacitors on systems with nonlinear components. The GEMTRAP system can be tuned to any desired frequency but is normally tuned to the fifth harmonic. The installation of this system is application specific.

Can a capacitor be installed indoors?

Capacitor assemblies made up of several units may be installed indoors and, since no single unit contains more than three gallons of the liquid, the installations will be in compliance with the requirements of the NEC. Line fuses are available on both low voltage and medium voltage equipment.

How does film/film dielectric affect the life of a capacitor?

The Film/Foil dielectric results in low watts per kVAR power consumption during capacitor operation. The less than 0.2 watts per kVAR losses and corresponding low internal heat generation mean low operating temperatures for the Film/Foil capacitor, a significant factor in extending capacitor life.
