

What are the frequency characteristics of capacitor impedance?

In the capacitive characteristic region, the larger the capacitance, the lower is the impedance. Moreover, the smaller the capacitance, the higher is the resonance frequency, and the lower is the impedance in the inductive characteristic region. Our explanation of the frequency characteristics of capacitor impedance may be summarized as follows.

What is a high frequency capacitor?

About High-Frequency Capacitors High-frequency capacitors are marketed as such due to their ability to retain ideal capacitive behavior up to very high frequencies. Capacitors will not exhibit ideal behavior up to the intended operating frequencies in RF systems, even if they are marketed as "high-frequency" or "RF" components.

How to choose a capacitor for noise control?

When selecting capacitors for use in dealing with noise, one should select the device according to the frequency characteristic of the impedance rather than the capacitance.

What does IR mean in a capacitor?

It may be that the term IR is generally used. C and ELS form a series resonance circuit, and the impedance of the capacitor has what is essentially a V-shape frequency characteristic, as shown in the diagram. Up until the resonance frequency, the capacitive characteristic is exhibited, and the impedance falls.

What is the inductive region of a RF capacitor?

This is known as the inductive region of the impedance curve and is a direct result of the capacitor's Equivalent Series Inductance (ESL). For some applications, it is necessary to stay well below the SRF, so RF capacitors need to have as high an SRF as possible. Figure 4 - Impedance versus frequency of a Class 1 RF capacitor showing the SRF.

What type of capacitors have a high stability?

These capacitors are usually ceramics, and some ceramic dielectrics like NP0/C0G have very high stability. Self-resonant frequency or ESL: These values might be specified on a design curve or provided directly in the datasheet. They could also be determined from an impedance curve.
