# Reflections on the visit to new energy batteries

Why do we need a new battery chemistry?

These should have more energy and performance, and be manufactured on a sustainable material basis. They should also be safer and more cost-effective and should already consider end-of-life aspects and recycling in the design. Therefore, it is necessary to accelerate the further development of new and improved battery chemistries and cells.

#### Why is battery recycling important?

The increasing electrification in today's society raises the demand for battery recycling processes that are not only efficient and cost-effective, but also sustainable. In this way, the resource requirements and thus the ecological footprint of battery technologies could be reduced while increasing their success.

#### How can a new battery design be accelerated?

1) Accelerate new cell designs in terms of the required targets(e.g.,cell energy density,cell lifetime) and efficiency (e.g.,by ensuring the preservation of sensing and self-healing functionalities of the materials being integrated in future batteries).

#### Why are lithium-ion batteries important?

The increasing consumption of fossil fuels is driving environmental concern, requiring lithium-ion batteries (LIBs) to support a shift of energy supply to clean energies. Specifically, it is imperative that the market of electric vehicles (EVs) is decarbonized, which demands a consistent supply of LIBs and lithium.

#### Why do we need a new battery development strategy?

Meanwhile, it is evident that new strategies are needed to master the ever-growing complexity in the development of battery systems, and to fast-track the transfer of findings from the laboratory into commercially viable products.

### What are the development trends in battery technology?

A major trend is to replace critical elements in the battery by more sustainable solutions, while still improving the properties of the battery. In general, the following development trends can be noticed: o Replacement of critical elements in the cathode by more sustainable elements with a higher natural abundancy.

Nanotech Energy chief operating officer Troy Zerbe has hailed the groundbreaking promise of an all-American sustainability partnership after visiting American Battery Technology Company's (ABTC) lithium-ion battery ...

Battery Insiders is a podcast produced by Battery Associates that covers the topic of batteries and how they can contribute to a sustainable world. The podcast features a diverse range of experts and is hosted by Bhavya

Reflections on the visit to new energy batteries

Jha, Mariam Awara, and Dr. Simon Engelke.

In 2023, the European Union (EU) enacted the Regulation on Batteries and Waste Batteries (hereinafter referred to as the New Law on Batteries), which strengthens the regulatory ...

4 ???· Researchers compared the environmental impacts of lithium-ion battery recycling to mining for new materials and found that recycling significantly outperforms mining in terms of ...

The world is generating more renewable energy than ever before. Between 2007 and 2022, the global share of renewables in electricity generation rose from 18.24% to ...

Due to the limited service life of new energy vehicle power batteries, a large number of waste power batteries are facing "retirement", so it will soon be important to effectively improve the ...

Energy, which has a bearing on both economic and national security, is of importance and a major constraining factor to the economic and social development of China. The article analyses the current world energy status and development trend from the perspectives of resources, production and consumption and in the context of its implications on the ...

LiUI¼weight of lithium use per equivalent battery reaction (g)/energy produced per equivalent battery reaction (kWh). LiUI reflects lithium-use efficiency; that is, the lower is the LiUI the more efficient lithium use is attained. Table 4 and 5 showsthe calculation results of the theoretical LiUI and the practical LiUI.

A Reflection on Lithium-Ion Batteries from Lithium Resource Perspective. ... Beijing WeLion New Energy Technology Co., LTD. ... low-energy battery chemistry of LMO/Gr and LFP/Gr, 13.64%.

Abstract The increasing consumption of fossil fuels is driving environmental concern, requiring lithium-ion batteries (LIBs) to support a shift of energy supply to clean energies. ...

Advanced Energy & Sustainability Research, part of the prestigious Advanced portfolio, is the open access journal of choice for energy and sustainability science. The increasing consumption of fossil fuels is driving environmental concern, requiring lithium-ion batteries (LIBs) to support a shift of energy supply to clean energies.
