Silicon-based laminated perovskite battery process

Can a laminated perovskite/silicon tandem solar cell improve power output efficiencies?

In response, a novel lamination process that increases the degree of freedom in processing the top perovskite solar cell (PSC) is proposed. The very first prototypes of laminated monolithic perovskite/silicon tandem solar cells with stable power output efficiencies of up to 20.0% are presented.

What happens when a perovskite thin film is laminated?

As a consequence of this lamination step, the perovskite thin film recrystallizes and unites both half-stacks into a monolithic perovskite/silicon tandem solar cell. a) Illustration of the lamination process and device architecture of the laminated monolithic perovskite/silicon tandem solar cells.

What are laminated monolithic perovskite/silicon tandem solar cells?

The very first prototypes of laminated monolithic perovskite/silicon tandem solar cells with stable power output efficiencies of up to 20.0% are presented. Moreover, laminated single-junction PSCs are on par with standard sequential layer deposition processed devices in the same architecture.

Are laminated perovskite films good for solar cells?

Stacked perovskite films--laminated films in particular--have garnered considerable attention owing to their excellent potential for various applications. However, perovskite solar cells fabricated using laminated perovskite films exhibit a critically low power conversion efficiency.

Can perovskite/silicon tandem technology reduce the cost of electricity?

By processing top PSCs over silicon bottom solar cells, PCEs exceeding the record of single-junction silicon solar cells have been demonstrated in 2018. [10 - 12]Thereby, the perovskite/silicon tandem technology promises to reduce the levelized cost of electricity of the market-dominating silicon photovoltaics.

What are fully textured perovskite silicon tandem solar cells?

Fully textured perovskite silicon tandem solar cells rely on the deposition of the perovskite absorber on textured silicon with a >1 mm pyramid size, which represents the current standard in the industry. To bridge the gap between research and industry, these cells must demonstrate a high power output.

Perovskite is named after the Russian mineralogist L.A. Perovski. The molecular formula of the perovskite structure material is ABX 3, which is generally a cubic or ...

The two-terminal laminated silicon/perovskite tandem solar cells based on the high-efficiency PSCs achieved record-high PCEs of 32.07 % @0.09 cm 2 and 28.32 % @1 cm ...

The invention belongs to the technical field of solar cells, and provides a preparation method of a
