When the Smart Storage battery fails, the baremetal server does not respond. In addition, the following message is displayed in Integrated Management Log (IML). "POST Error: 312-HPE Smart Storage Battery 1 Failure - Communication with the battery failed. Its output may not be enabled. Action: Verify battery is properly installed.

What should I do if my smart storage battery fails?

Refer to user guide. Contact HPE support if condition persists. Smart Storage Battery failure (Battery 1). Action: 1. Consult server troubleshooting guide. 2. Gather AHS log and contact Support Smart Storage Battery has exceeded the maximum amount of devices supported (Battery 1 service information: 0x07). Action: 1. Remove additional devices. 2.

Why does a smart battery charger not recognize a battery?

There are situations where a 'smart' battery charger won't recognize a battery because the battery is deeply discharged. Some chargers have a relatively high voltage threshold. Remember, a 12 volt battery (adjust numbers for 6 volt, etc.) is effectively discharged at 11.9 to 12 volts (fully charged is 12.72 volts).

What should I do if my Smart Storage Battery has exceeded 0x07?

Action: 1. Consult server troubleshooting guide. 2. Gather AHS log and contact Support Smart Storage Battery has exceeded the maximum amount of devices supported (Battery 1 service information: 0x07). Action: 1. Remove additional devices. 2. Consult server troubleshooting guide. 3. Gather AHS log and contact Support "

Do I need a new battery if I have a post error?

In many cases, array acceleration and some other critical features rely on that battery to function properly. If the POST errors are suggesting the battery be replaced, you should absolutely get a new battery. Please power off the hardware, remove power cables, wait... then power everything back on again. Watch the POST messages for any changes.

Why is my smart array controller not working?

While you're at it, check the Smart Array controller itself. It could be the P440ar in these servers. If they have this model, then it's the mezzanine card towards the rear of the server in front of the riser cages. It had tons of firmware issues over its life cycle, resulting in unstable operation or even bricking the controller.

If your APC Smart-UPS does not recognize the new battery or shows warning indicators, check that all connections are secure and properly seated. If issues persist, perform a runtime ...
