

Well there is some fact and fiction with 10% charge current. PWM and MPPT charge controllers are very different animals. With PWM CC the Input current = Output current so if you wanted to say run a 12 volt @ 130 Amp Hour battery with a C/10 charge current (10%), you would have to select a solar panel with a I_{mp} (current maximum power) or 13 amps. 13 is 10% ...
