

Solar panels are installed vertically to the ground

What is a vertical solar panel installation?

Vertical solar panel installation is an arrangement of panels that are mounted in a vertical orientation on a rooftop or other structures. This kind of installation is also known as portrait orientation, where panels are positioned flat parallel to the ground, often perpendicular to the roof's surface.

Should you choose horizontal or vertical solar panels?

Horizontal or vertical installation depends on optimizing sunlight exposure. If you live in a cold or snowy region, choose vertical solar panels. Compliance with the necessary guidelines is essential to make a trouble-free solar panel installation.

Why should you install vertical solar panels?

Unique Design Possibilities- With the installation of vertical solar panels, you can enhance the visuals and aesthetics of your home. It comes in modern designs, giving a peachy look to your space. **Less Sunlight Exposure-** Compared to horizontal solar panels, vertical orientation receives less sunlight even in the middle of the day.

Are vertical solar panels right for You?

Instead of relying solely on sunlight from above, vertical solar panels can capture sunlight from various angles throughout the day. This is particularly advantageous in urban environments where tall buildings or surrounding structures can cast shadows on traditional horizontally installed solar panels.

Can vertical solar panels be used in buildings?

Absolutely. The adaptability of vertical solar panels extends to their mounting systems. So, they are specifically designed to attach to vertical surfaces securely. This opens up a realm of possibilities for integrating solar panels seamlessly into the architecture of buildings.

Should you install vertical solar panels if it rains?

On the other hand, vertical solar panels are more likely to get washed when it rains. Also, for those who live in snow-heavy areas, installing vertical solar panels can help with production. When snow completely covers the panels for weeks during winters, sun rays might not reach the panels.

Ground mounted solar panels are 20%-25% more efficient than rooftop solar panels, as they can be positioned in the ideal direction and angle to maximise energy ...
