## **SOLAR** PRO. Solid-state battery scale production rate

## Are sulfide-based solid-state batteries scalable?

Scalable technologies and key challenges along the process chain of sulfide-based solid-state batteries are accordingly addressed. Experimental investigations yield crucial insights into enabling large-scale production of sulfide-based battery components while highlighting remaining challenges from a production perspective.

What is the manufacturing approach for solid-state batteries?

The manufacturing approach for solid-state batteries is going to be highly dependent on the material properties of the solid electrolyte. There are a range of solid electrolytes materials currently being examined for solid-state batteries and generally include polymer, sulfide, oxides, and/or halides (Fig. 2 a).

Could solid-state batteries revolutionize the EV landscape?

Solid-state batteries (SSBs), characterized by their use of solid electrolytes (SEs) instead of volatile/flammable liquids (Figure 1), could revolutionize the EV landscape. SSBs offer significantly enhanced energy densities if they utilize high-specific-capacity electrodes, including Li metal or alloys.

How much does a solid-state battery cost?

Solid-state batteries (SSBs) are regarded as safer and potentially more energy-dense alternatives to conventional liquid electrolyte-based batteries. However, their current estimated cost exceeds \$100/kWhdue to the high material processing costs and low-throughput manufacturing methods.

Are all-solid-state batteries causing high production costs?

All-solid-state batteries are moving from prototype sample cells to engineering-scale production and are also expected to encounter high early-stage production coststhat could raise initial product prices.

How will the battery manufacturing industry grow in the next decade?

The battery manufacturing industry is expected to grow by an order of magnitude in the next decade. Battery manufacturing involves three primary processes: (1) electrode production,(2) cell production,and (3) cell conditioning.
