SOLAR PRO. Stable power supply to charge the battery

How does the power supply charge the battery?

charging current, the power supply emulate the behavior of a Li-ion battery charger, which is constant current until the desired cell voltage is reached (usually 4.2 V), then switch to constant voltage.

Is a battery charger a power supply?

Any battery charger IS A POWER SUPPLY!......FULL STOP. The voltage is fixed,unlike a variable power supply. The maximum amps is always written somewhere. The Lead acid chargers supply ripple current and one should connect a 1000 Micro-farad condenser (or larger) across the terminals (inside) if you want to use it as a power supply.

What types of batteries can the pl6100 charge?

The PL6100 features the ability to properly charge a wide variety of lead acid batterytypes,including Conventional,AGM,Spiral Wound,Start-Stop,Deep Cycle and Marine batteries - for virtually any lead acid battery type installed in a vehicle,the PL6100 can deliver a proper,beneficial charge.

How does the pl6100 adapt its charging approach?

The PL6100 adapts its charging approach based on the needs of each battery or battery pack it services. Such adaptations can include activating a soft start mode on deeply discharged batteries, a battery repair mode on older/distressed batteries and temperature compensation when charging in extreme temperatures.
