

What are the new battery standards?

The new standards underpin innovation and enables consistent practices in the production of batteries and the development of battery technology with guidance on health, safety and environmental considerations in battery manufacturing and use.

What are battery safety requirements?

These include performance and durability requirements for industrial batteries, electric vehicle (EV) batteries, and light means of transport (LMT) batteries; safety standards for stationary battery energy storage systems (SBESS); and information requirements on SOH and expected lifetime.

What is the battery manufacturing and technology standards roadmap?

battery manufacturing and technology standards roadmapWith a mind on the overarching goal behind the roadmap recommendations to continue building an integrated, UK-wide, comprehensive battery standards infrastructure, supported by certification, testing and training regimes, and aligned with legislation/regulatory requirements; it is pro

Why are UK battery standards important?

The standards are an important step in creating a sustainable UK battery manufacturing supply chainand will help prepare for the phasing out of diesel and petrol vehicles by 2030.

What is the new EV battery standard?

The new standard is intended to establish a common understanding and approach to EV battery cell manufacture and use. It covers 12 themes including sourcing; chemical management (occupational health, personnel safety); waste handling; and environmental impact.

What are the UK battery standards?

The standards are intended to help scale-up and advance the production, safe use and recycling of batteries in the UK, in a growing market worth an estimated £5 billion in the UK and £50 billion across Europe by 2025 3.

The newly approved Regulation (EU) 2023/1542 concerning batteries and waste batteries [1] sets minimum requirements, among others, for performance, durability a
