

The current situation of Chinese solar companies

Why are solar companies struggling in China?

Many of China's provinces are struggling to service their debts. Solar companies must also compete for government largesse with firms in other industries that are grappling with overcapacity as China's economy slows. More than a fifth of Chinese industrial firms were unprofitable last year, according to analysis by Rhodium, another consultancy.

Why are China's solar companies undercutting each other?

China's world-dominating solar firms have been forced to sell below cost after a breakneck buildup in capacity to feed China's renewables boom. Companies are undercutting each other to maintain market share, and most are expected to report losses this year, BloombergNEF said in a report earlier this month.

Why did China's top solar companies lose in the third quarter?

Photographer: Qilai Shen/Bloomberg (Qilai Shen/Bloomberg) (Bloomberg) -- China's top solar manufacturers posted big losses in the third quarter as severe overcapacity and price wars continue to hurt the companies producing equipment critical to global energy transition.

Will China's solar industry expand by 2026?

Wood Mackenzie forecasts that China's solar industry will expand capacity to nearly 1,700 GW by 2026. State support for the industry is contributing to the supply glut. For decades leaders of municipal and provincial governments in China have sought to build local solar industries that hire from their populations and contribute taxes.

Should China's solar industry exit the market?

China's main solar industry association earlier this month called for rational pricing and urged companies to be more disciplined in bidding for projects. Over the summer, it said struggling manufacturers should exit the market as soon as possible.

Will China's solar industry get quotas?

The firms will receive quotas for how much they can produce next year, based on their existing market share and capacity as well as expected demand, according to local media. The CPIA declined to comment on the agreement. The accord comes as China's solar industry contends with overcapacity, heightened geopolitical tensions and slowing demand.

After direct exports of solar products from China to the U.S. were blocked, Chinese solar companies quickly turned Southeast Asia into a "transit hub." However, in June 2024, the U.S. International Trade Commission (USITC) ruled that solar products from four Southeast Asian countries were subject to anti-dumping and countervailing duty investigations, ...

The current situation of Chinese solar companies

According to the China Meteorological Administration, China has abundant solar energy resources. The total potential for solar radiant energy of 1.7×10¹² tce (tons of standard coal equivalent) per year for the entire country. More than two-third of the country has over 2000 h of sunshine each year, which provides an equivalent annual solar radiation of over 5.02×10⁶ ...

2 ???· China's solar industry is under severe pressure: falling prices are being compounded by patent lawsuits. This could have a global impact.

For Chinese solar photovoltaic (PV) manufacturers, things are going from bad to worse. Recently published third quarter reports showed that many of the largest players are posting significant losses as they continue to compete in a vicious price war.
