## The investment value of cobalt batteries

Is cobalt a good investment for EV batteries?

Cobalt, essential in lithium-ion batteries for EVs finds itself at the intersection of demand and ethical challenges. Gain insights into cobalt investing. This article is part of our series on investing in battery metals. You may also like our comprehensive guide to metals and mining.

Will lithium-ion batteries drive the cobalt market?

Today, this critical metal is an essential ingredient in electric vehicle (EV) batteries, energy storage systems, metal alloys and more. The lithium-ion battery sector in particular has become a major source of cobalt demand, and analysts expect that this sector will drive the cobalt market going forward.

How does cobalt affect EV battery production?

EV Battery Production Cobalt's role in enhancing energy density and ensuring stability in lithium-ion batteries is indisputable. These batteries rely on the movement of lithium ions (Li+) between the anode and the cobalt-containing cathode.

How much cobalt does a battery need?

Cumulatively,batteries for EVs,consumer electronics and stationary storage will require at least 5.5 million tonsof cobalt - one of the key battery elements ensuring range,safety and durability - by 2050 to power these critical energy transition industries.

Why is cobalt used in lithium ion batteries?

Cobalt is often used in lithium-ion batteries, particularly in the cathode, due to its ability to improve energy density and cycle life. However, the high cost of cobalt, ethical concerns surrounding its mining, and supply chain risks have driven research into alternative battery technologies and chemistries.

How much investment is needed to build new cobalt mines?

Such growth in demand across all sectors will require a corresponding growth in supply to keep up. Over \$1.7 billion of new investment is required by 2050 to build the new cobalt mines needed to meet global demand for net zero.

LFP batteries dominate as cobalt-rich chemistries decline. According to S& P Global, during the third quarter, the market share for NMC batteries stood at 24.6 percent, while competing chemistry ...

As the COP28 climate summit unfolds, an UNCTAD report sharpens the focus on trade in critical minerals that are essential for clean energy technologies examines trade flows of lithium, cobalt and graphite through

Additionally, 23 new projects to construct EV battery component plants were identified, with a combined

investment value of USD25.2bn We believe that these types of investments are closely related to the ...

Electric Vehicle (EV) batteries will be an essential part of decarbonising transportation and cobalt will play a crucial part in this. Cobalt Institute has worked with expert consultancy Minviro to develop a fully peer reviewed ISO 14040/14044 compliant lifecycle assessment that addresses not only the manufacturing of EV batteries but also their use.

BASF's investment in battery materials production in Europe will help customers keep the carbon footprint through the value chain for electromobility as low as possible. ... the upstream integration into the key raw materials like Cobalt and Nickel, as well as the short transportation route along the value chain, BASF is able to reduce the ...

substances (like battery-grade cobalt sulphate for use in batteries). As mentioned earlier, 72% of cobalt was refined in China in 2021, with the second largest refining country being Finland16. 20) The market is currently reliant on the DRC for mined cobalt, largely because cobalt from the DRC is produced at scale and at low cost.

At a glance Increasing global battery demand is raising the need for a circular battery value chain EV battery retirements alone could surpass half a million vehicle batteries ...

Low-cobalt lithium-nickel-manganese-cobalt-oxide (NMC) and cobalt-free lithium-iron-phosphate (LFP) batteries offer the potential to significantly reduce reliance on ...

5 ???· Over the course of 2021, when the electrification of the global car parc reached 286 GWh, according to Adamas Intelligence data, the value of cobalt found in the battery ...

Achieving a more sustainable, circular economy for cobalt will require continued innovation, investment, and global cooperation. TechInsights, through its Battery Essentials Channel, stands ready to evaluate the impact of recycled cobalt on consumer electronics and monitor developments in the recycling industry.

As Minister of Industry, Paluku oversees cooperation and investment opportunities in industry in the DRC. Paluku is a pioneer of creating a local battery value chain in the DRC and supports efforts directed at achieving these goals. Prior to assuming this position, Paluku, an experienced politician, was the governor of North Kivu in the DRC.
