What is the world's first off-road solar-powered car?

Stella Terrais described as the "world's first off-road solar-powered car." It was developed by the students at Eindhoven University of Technology,in the Netherlands,and tested on rugged terrain in Morocco. The student team drove the car more than 1,000 kilometers (621 miles) between Morocco's northern coast and the Sahara Desert in the south.

Could the world's first off-road solar-powered vehicle help connect remote areas?

Built by a team of students at Eindhoven University of Technology (TUE), "the world's first off-road solar-powered vehicle" could help connect remote areas "where roads are less developed and energy grids are not as reliable," and assist with emergency aid and deliveries, says Thieme Bosman, events manager for the team.

How fast can a solar car go?

It can travel up to 74.8 kilometers on one charge, and has a maximum speed of 79.2 km per hour. The solar module of the car totals 8.1 square meters, and serves as the vehicle's only power source. Boasting 47 cutting-edge pieces of technology and products, the intelligent vehicle integrates the efforts of 42 enterprises and three universities.

Where will China's first solar-powered and intelligent connected car be displayed?

The car will also be displayed in other provinces, including Jilin and Qinghai. China's first solar-powered and intelligent connected vehicle, launched by Tianjin, exemplifies the benefits of teaming up in a bid to make technological breakthroughs.

How does a solar campervan work?

Like the SUV, the campervan was powered entirely by the solar panels on its roof. The interior of the campervan featured a double bed, couch, kitchen area and bathroom with a sink, shower and toilet. When the extendable roof is lifted, occupants can shower, make a cup of coffee and watch TV using the energy of the sun alone.

How far can a car go on a sunny day?

The road-legal car has a top speed of 145 kilometers (90 miles) per hour. On a sunny day, its battery range is around 710 kilometers (441 miles) on roads, and around 550 kilometers (342 miles) off-road, depending on the surface. In cloudy conditions, the team estimates the range could be 50 kilometers less.
