

Do solar modules have low light performance?

The low light performance of solar modules is of high importance for operating cost effective PV systems, particularly during winter season in Europe. In this paper the low light performance of solar cells and modules is investigated with a simple approach.

Why do perovskite solar cells have low shunt resistance?

Perovskite solar cells with higher shunt resistance exhibit better weak light performances. The perovskite solar cells with low shunt resistance exhibit a significant weak diode leakage mechanism, and thus their output characteristics would decrease seriously with the decrease of light intensity.

Why do solar cells have weak-light performance?

In the high wind regime, however, the power production saturates, since these turbines have a reduced nominal power  $P$ . This justifies the ansatz Weak-light performance of solar cells depends on the material used.

Do perovskite solar cells have a weak light performance?

Our theoretical and experimental results reveal the factors affecting the weak light performance of PSCs, and offer constructive guidelines as following for the future design and fabrication. Perovskite solar cells with higher shunt resistance exhibit better weak light performances.

How does light intensity affect a solar cell?

Changing the light intensity incident on a solar cell changes all solar cell parameters, including the short-circuit current, the open-circuit voltage, the FF, the efficiency and the impact of series and shunt resistances.

How can cells with poor weak light performance be identified?

In this way cells with poor weak light performance may be identified in a simple and fast way. Simulated and measured efficiency data for 2BB and 3BB modules, normalized to 100% at 1000 W/m<sup>2</sup>: the difference in series resistance is affecting the weak light efficiency (from ).

The solar cell was examined at very low and low light intensity (5% and 35% of sun, respectively), and at standard test conditions (100% of sun) using different light sources.
