

What are the regulations for energy storage charging piles in Sarajevo

Are there legal issues relating to energy storage?

As set out above, there are a wide variety of energy storage technologies and applications available. As a result there are a number of legal issues to consider, although the relative importance of such issues will be informed by the specific energy storage project design. revenue stream requirements e.g. double circuit connection.

What is a standalone energy storage project?

Standalone energy storage projects are increasingly utility-scale installations. For example, a battery array can provide a range of services, including ancillary services, to the system operator or network owner. This type of project allows for the deferral of network reinforcement works or islanded networks.

Does energy storage need a regulatory framework?

Our review demonstrates that no jurisdiction currently provides a comprehensive regulatory framework for energy storage, with the majority of jurisdictions currently allowing storage to be defined as "generation" for the purposes of licensing and other regulatory requirements.

What is a co-located energy storage project?

In these projects, the energy storage technology will be developed alongside a generation facility. An example of a co-located project could be a solar park developed alongside a battery; in times of high generation or low energy prices, the battery can store the solar-generated power, to be exported later, at the evening peak.

What are the different types of energy storage projects?

Energy storage may be used in a range of project types, including standalone, co-located, and behind-the-meter projects. Standalone energy storage projects are increasingly utility-scale installations. For example, a battery array can provide a range of services, including ancillary services, to the system operator or network owner.

Which energy storage technologies are being installed?

As is evident from our survey, a range of energy storage projects have been installed or are due to be deployed in the majority of jurisdictions; and whilst battery technologies are receiving the bulk of industry attention at present, a range of technologies have been, and are due to be, installed, pumped hydro storage in particular.
