What if my mod takes more than one battery?

If your mod takes more than one battery, use "married" batteries. This means that the batteries live their whole lives together. Get batteries that are the same type, buy them at the same time, charge them together and only use them together.

Can you use a mod with an external battery?

Making sure that you don't exceed the amp limit of your battery is one of the most important things to keep in mind when you're vaping using a mod with an external battery, but there are a few other key tips you need to follow to stay safe.

How do I choose a vape battery for my mod?

When choosing a vape battery for your mod, it's important to pick one which best suits your vaping needs. Batteries with higher Milliamp Hours (battery life) tend to have a lower discharge rate (lower Amperage, or how much power they can deliver at once). This makes them more suitable for lower wattage devices.
